Dr.WEB®
Made in Russia

Dr.Web Security Space for Android

www.drweb.com

Android 4.4-10.0
Android TV 5.0+

- The first Russian anti-virus for Android
- Over 140 million downloads — just from Google Play
- Protects smart phones, tablets, smart TVs and gaming consoles

Dr.Web Security Space for Android

Protection from: all types of malicious programs that steal money and data from Android devices; encryption ransomware; unwanted calls and short messages; and dangerous web content.

- Performs quick or full file system scans, as well as custom scans of user-specified files and folders.
- The SpIDer Guard monitor scans file systems in real-time whenever an attempt is made to store files in the device's memory.
- Neutralises ransomware lockers and keeps data intact, eliminating the need to pay a ransom to criminals. Even if a device is locked, and even from lockers that haven't yet been added to the Dr.Web virus database.
- Using the unique Origins Tracing™ technology, detects new, unknown malware.
- Moves detected threats to the quarantine from which isolated files can be restored, if needed.
- Minimally impacts system performance.
- Economises battery resources.
- Economises traffic due to the small size of the virus database updates, which is particularly important for users whose mobile device plans have usage limitations.
- Password-protected anti-virus settings and password-protected access to applications
- Detailed statistics reveal what threats have been detected and what actions have been taken with them.
- Offers handy and informative desktop widgets for accessing applications.

Today's Android Trojans can steal anything you value — from photos to money. And Dr.Web for Android can protect all those things.

Protection components*

Anti-virus — will reliably protect against all types of malicious programs created to infect mobile devices.	**Call and SMS Filter**** — will shield against unwanted calls and SMS messages.	**URL filter** — will restrict access to unwanted Internet sites, using whitelists and blacklists, or thematic categories.
Firewall — will control application network activity.	**Anti-theft** — will help you find your mobile device if it gets lost or stolen, and if necessary, wipe confidential information from it remotely.	**Security Auditor** — will troubleshoot the device to identify security problems and offer solutions to address them.

Dr.Web Parental Control

Keeps your children from visiting webpages you deem to be undesirable. Access to them will be blocked according to a blacklist or thematic groups of sites (gambling, social media, etc.).	Will not allow your children to add unwanted numbers to the Call and SMS Filter. Thus, your children will be protected from calls from unknown numbers—only people you know will be able to reach them.	Prevents your children from accessing applications you believe they don't need and won't let them launch those applications.	Will not allow your children to change the restrictive settings you establish (for example, Dr.Web filter whitelists and blacklists).

* Only the Anti-virus, Firewall, and Security Auditor are available for devices running Android TV.

** This component cannot be used on a SIM-less device.
